Embracing Our Core

About Us

Hatta Trading & Services (HTS) had its beginnings as a modest sourcing and service enterprise nestled in the heart of Abu Dhabi approximately three decades ago. Through diligent efforts and an unwavering dedication to excellence, we have evolved into a vibrant and versatile force, catering with pride to a diverse array of industries across the UAE. Our journey has been marked by unwavering diligence and a steadfast dedication to upholding the highest standards of quality.

Grounded in engineering procurement, we have refined our capabilities to offer comprehensive and tailored solutions that cater to the unique needs of our valued clients. From sourcing top-quality products to delivering impeccable services, our aim is to consistently go above and beyond expectations in every aspect of our work.

We are an ICV-certified company significantly contributing to the UAE's ICV program, aligning with the nation's goals for sustainable development and growth through local sourcing, partnerships, workforce development, technology transfer, and economic diversification.

Our Core Activities

Prequalification

Securing prequalification of your brand and products with ADNOC (Abu Dhabi National Oil Company), ADWEA (Abu Dhabi Water and Electricity Authority) and similar government entities presents a valuable opportunity to engage in business of the world's recognized industries. These companies maintain specific protocols and benchmarks for supplier registration, and this is precisely where our assistance comes into play. We are dedicated to facilitating your seamless navigation of supplier onboarding processes.

Procurement Solutions

We provide comprehensive procurement solutions, drawing upon over three decades of our invaluable experience. Our expertise lies in sourcing through established global manufacturer and export house connections, supporting the UAE industries meeting their unique technical requirements and strict timelines, with a particular focus on ADNOC. We excel in delivering products that adhere to precise specifications, ensuring timely delivery and reliability in every aspect of our Clients procurement needs.

Engineering Services

We provide comprehensive engineering support to our clients for the products we supply. Our commitment extends beyond mere transactions; we are dedicated to ensuring that our clients' needs are met at every stage of their product lifecycle. Our all-encompassing engineering support reflects our commitment to being a reliable partner throughout your journey with our products. From commissioning to maintenance, customization to fabrication, we stand by you, ensuring that your operations run smoothly, efficiently, and effectively.

We have welcomed progress throughout our transforming journey with a visionary attitude, exploring new vistas and seizing novel chances. Today, we can meet the different needs of our clients by acting as a one-stop shop because our capabilities span a wide range of goods and services.

Our steadfast commitment to fostering and upholding our company's standards is at the heart of our success. Every part of our business is driven by quality, guaranteeing that customer engagement is addressed with service excellence.

As a result of our unwavering commitment to excellence, we have amassed a prestigious clientele that spans various industries over the years. Our business relationships are genuine alliances based on mutual growth, integrity, and trust rather than merely transactional.

To support sustainability We are always trying to supply environmentally friendly products like the most advanced, innovative and environmentally formulated fire fighting, tank cleaning and explosive vapour control products with unlimited shelf life from FireAde & an innovative environmentally friendly Clean, Dry, Low Dust, Reusable Abrasive Blasting System from SpongeJet and to our customers.

Our Milestones

As an emerging engineering company in the UAE, Hatta Trading and Services have showcased the company's enduring presence by expanding our products and services, indicating our growth and credibility.

Our **Services**

Throughout the years, Hatta Trading and Services developed vital and strategic services nationwide that serve our clients best.

Automated Lubrication System

Nearly all industrial equipment and machinery require precise lubrication to function optimally. Automated lubrication systems offer reliable delivery of lubricants at specific intervals and quantities to vital lubrication points.

Clean, Dry, Low Dust, Reusable Abrasive Blasting

We can support with you an advanced and innovative approach to surface preparation and cleaning: Clean, Dry, Low Dust, Reusable Abrasive Blasting. This innovative technology revolutionizes traditional blasting methods by combining efficiency, sustainability, and effectiveness like never before.

Flow Control Solutions for Air, Gas & Fluids

Flow control solutions are designed to manage, regulate, and optimize the movement of air, gases, and various types of fluids within industrial processes, systems, or applications. These solutions are employed to control the rate, direction, pressure, and volume of these substances to ensure efficient and effective operations in diverse industries. These products play a very crucial role in any of the areas of application.

Industrial Communication System (PAGA)

Industrial communication systems are the backbone of modern industries, serving as the lifeline for seamless operations and ensuring safety across diverse sectors.

Pipe Hangers and Support

Pipe hangers and supports serve as indispensable elements across diverse industrial environments, encompassing power plants, refineries, nuclear installations, and process industries.

Steam Trap Assessment Service

Steam traps have a finite operational lifespan, and the efficiency of the system can be compromised due to wear and tear on the valve and valve seat over time. To mitigate energy loss resulting from steam leakage, it is essential to conduct routine evaluations and maintenance on steam traps.

Our Products

We serve the high quality products that are crafted in the best way.

Specialised Consultancy Services

E2G | The Equity Engineering Group, Inc. is a technology-driven company that solves engineering problems. Our consulting services and software are focused on finding answers to challenging industry problems, while promoting safety and reducing risk to people, equipment, and the environment.

 www.e2g.com

Fitness-for-Service (FFS)

Fitness-For-Service (FFS) is a multi-disciplined engineering assessment used to make run, repair, or replace decisions for equipment or piping systems that contain a flaw or are subject to a particular damage mechanism. FFS assessments are also used to determine remaining life and to optimize inspection plans (including inspection techniques and inspection frequency).

Risk-Based Inspection (RBI)

Risk-Based Inspection — A Smarter Way to Inspect.

Risk-based inspection (RBI) quantifies risk and gives you the wisdom to make informed decisions about how, where, and when to inspect assets.

Remove uncertainty by evaluating your equipment and refocusing inspection efforts onto the highest-risk items.

Sageplus Software

Achieve safer facilities and plants by evaluating equipment design and in-service conditions to make informed engineering decisions on the remaining life of fixed equipment, piping, and structures.

- Power plants

Industrial Valves and Flow Control Solutions

A control valve varies the rate of flow passing through itself. The valve stem moves, altering the size of the passage and this increases decreases or holds steady the flow. The control valve opening is altered whenever the process parameter being controlled does not equal the value it is meant to be (the set point).

Clean, Dry, Low Dust, Reusable Abrasive Blasting

Sponge Blasting system is an innovative environmental friendly commercial and industrial blasting technology replacing all traditional blasting methods.

 www.spongejet.com

Products

Sponge Media

Integrated Systems

Portable Feed Units

Portable Recyclers

Saber Nozzles

Robotica - Internal Pipe & Tube Blasting

Accessories

Why Spongejet?

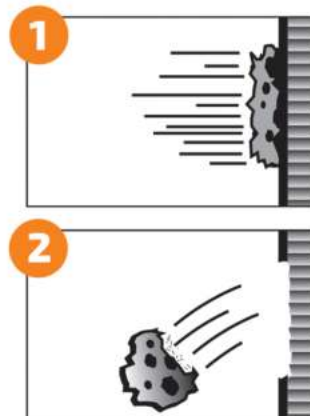

Sponge-Jet's low dust, low ricochet and recyclable process offers:

- Lower fugitive emissions
- Less worker exposure and fatigue
- Less eye and other injuries
- Enhanced visibility and first-pass quality
- Fewer defects and rework, keeping projects on schedule
- High-quality surface preparation in sensitive or confined areas
- A solution for preparing surfaces near finished coatings, instruments and equipment
- Low inbound and outbound freight
- Less pollution, waste generation, fines and reporting
- Improved community relations
- The ability for other trades to work nearby
- Less downtime, improved asset availability
- Coatings perform longer, saving on maintenance costs
- Easier staging, containment, ventilation and clean up
- Less waste, disposal and material handling

How it works?

The heart of the Sponge-Jet System is its Sponge Media. This technology combines the containment capability of sponge and the cleaning and cutting power of conventional abrasives.

The pliant nature of Sponge Media abrasives allow its particles to flatten on impact (fig. 1), exposing the abrasive. After leaving the surface, the media expands, creating a vacuum – entrapping most of what would normally have become airborne contaminants (fig. 2). This is referred to as Sponge Media's MicroContainment.

The Sponge-Jet Process:

Sponge Media abrasives are available in 20 types for any application. All provide dry, low dust, low rebound blasting.

Sponge-Jet Feed Units propel Sponge Media abrasives to the surface. A centralized panel provides adjustment of blast pressure and media feed rate allowing for precise control.

Areas of Applications

- Buildings & Infrastructure
- Chemical & Petrochemical
- Manufacturing
- Marine
- Military
- Oil & Gas
- Power
- Transportation & Automotive
- Water & Wastewater

Flexible Piping, Expansion Joints, Special Hoses
